

# Overview of CARE Indicators

COLLECTIVE BENEFIT	AUTHORITY TO CONTROL	RESPONSIBILITY	ETHICS
Conduct data needs assessment	Recognize IDSov in process tools and documents	Co-develop relationship agreements with Indigenous Peoples	Support use of Indigenous ethical frameworks
Document Indigenous Provenance	Uphold FPIC	Promote equitable attribution including acknowledgment and authorship	Promote Indigenous interpretation and presentation of findings
Use Indigenous-defined methodologies	MOUs use iterative consent	Collect data relevant to Indigenous languages and worldviews	Facilitate Indigenous review of outputs
Identify and integrate community-specific data principles	Complete IDSov training(s)	Ensure data of interest are findable by communities	Respect authority of Indigenous decision-making bodies
Identify and disclose project risks and benefits for Indigenous data and Peoples	Support use of Indigenous metadata fields	Assess and address Indigenous communities' data capacity needs	Document continuous consent
Disclose benefit-sharing plans	Establish community-defined data governance commitments for reporting		Compensate research participation
Establish community-defined metrics of success	Ensure datasets have an Indigenous reference or notice/label		Share copyright
Ensure Indigenous Peoples determine data disaggregation and obfuscation levels	Follow Indigenous-determined data access protocols		Record Indigenous provenance and purpose metadata for all collected data
	Describe how data will be made available to Indigenous communities in data sharing agreement		Address Indigenous decision-making on secondary use and data erasure
			Establish post-project Indigenous data protection and access plans
